

	SDLC	STLC
Phases	Requirement Gathering, Analysis, Design, Coding, Testing, Deployment & maintenance	Requirement Analysis, Test Planning, Test Design, Environment Setup, Test Execution, Test Closure
Design Phase	The development team develops the high and low-level design of the software based on the requirements	Test Architect or a Test Lead usually plan the test strategy
Coding Phase	The actual code is developed as per the designed document	The QA team prepares the test environment
Testing Phase	Actual testing is done in this phase. It includes Unit, Integration, System, Retesting & Regression testing etc., Also the development team involves in fixing the bugs reported	Actual testing is done in this phase. Defect reporting & retesting is done here
Deployment or Maintenance Phase	The development team involves in support and release updates A good quality software product	The QA team executes regression suites to check maintenance code deployed A bug free software

Who will do unit testing and what is the importance of unit testing ? explain about quality control ?

Unit testing performs by developers, If a login function fails at unit testing, the developer fixes it immediately. If it fails after integration, it may break the entire login flow and affect multiple modules. **quality** control is about detecting defects in the final product through testing.
